## AMENDMENTS TO THE SPECIFICATION

Please replace the paragraph beginning on page 25, line 1, with the following rewritten paragraph:

Referring to Figs. 14 and 15, a mode of operation of the pouch of Embodiment 12 is described. Pouch body 1 and branched chamber 2 are filled. The pouch is invented and extended such that branched chamber 2 becomes linear with pouch body 1. Pouch body 1 is pressed to unseal seal part [[3]] 4 mixing the contents of pouch body 1 and branched chamber 2. Plug body 8 is then removed to allow for the pouring of the mixed contents from the pouch.

Please replace the paragraph beginning on page 20, line 8, with the following rewritten paragraph:

Referring to Figs. 16 and 17, a self-standing pouch optionally includes plug body 8 at top part 7 of pouch body 1. Seal part 4 is preferably a readily unsealable seal member. After the contents of pouch body 1 and branched chamber 2 are mixed, the contects are removed through plug body 8. Branched chamber 2 optionally includes pouring spout 3 (not shown in the figures) as an additional pouring of refilling passageway.
